

Chenega Corporation

Ashburn, Virginia

- 8,300 square feet of cubicles and private offices
- Manager's voice was heard in adjacent areas, creating privacy and distraction issues
- Qt Quiet technology™ sound masking solved the problem, enhancing privacy and productivity
- Chenega expanded the Oasis Qt™ system to another 30,000 square foot space

CASE STUDY

Space Description

8,300 square foot office space with cubicle areas and private offices on a single floor.

Challenge

One of Chenega's managers has a loud speaking voice which generated distraction and privacy concerns. The employees outside of his office were having trouble concentrating — not to mention overhearing confidential information.

Solution

Cambridge Sound Management recommended a Qt Quiet technology™ sound masking system configured for open and private areas. Chenega's Maintenance team self-installed the system with guidance from CSM. The system successfully masks the manager's voice and subsequently reduces distractions in other areas of the office.

Result

Chenega is thrilled with the addition of sound masking to their environment. Management is happy the employees are no longer complaining about distractions, and employees are happy to be working in a comfortable, productive environment. Chenega was so pleased with the results that they recommended Qt Quiet technology™ to another office — Chenega Technology Services (CTS) — with 30,000 square feet of similar office space. CTS subsequently installed Qt Quiet technology™ sound masking and is also very pleased.
