

City Year Headquarters

Boston, MA

CASE STUDY

- 36,000 square feet of office space on 4 floors in downtown Boston
- Renovation plans called for more open office space
- Acoustical consultant recommended Qt Quiet technology™ sound masking to reduce distractions
- AV integrator installed the system

Space Description

36,000 square feet of office space on 4 floors in downtown Boston.

Challenge

Renovations to City Year's Boston headquarters building meant more open plan office space and greater potential for conversations to carry throughout the office. Loss of productivity due to distractions in the new space needed to be kept to a minimum.

Solution

City Year's acoustical consultant recommended that sound masking be incorporated into renovation plans. ADTECH Systems, the AV/Systems integrator on the project, installed a Qt Quiet technology™ sound masking system in all open plan areas of City Year's new headquarters. Conversations don't carry through the open areas and distractions are kept to a minimum.

Result

City Year is thrilled with their new, productive workspace. ADTECH Systems was so pleased with the technology and ease of installation that they have since installed Qt Quiet technology™ sound masking in other customer projects.
